Summary

Backend Engineer with 2 years of experience in **C#, .NET Core, ASP.NET Web API, EF Core, and SQL Server**, with working knowledge of **React.js**. Experienced building scalable, enterprise-grade backend systems at Unthinkable Solutions, with a focus on performance, maintainability, and secure API design.

Technical Skills

Languages: C#, JavaScript, C++, OOPs

Backend: .NET Core, .NET Framework, ASP.NET Web API, ASP.NET WebForms, WCF, EF Core, REST APIs, REST Principles, CQRS, Caching

Frontend: React.js, HTML, CSS, Tailwind CSS

Databases: SQL Server, Database Management, Query Optimization

Security: JWT Authentication, OAuth 2.0, ASP.NET Identity, Role-Based Access Control (RBAC), API Security

Tools & Practices: Git, CI/CD (basic), Postman, SOLID Principles, Agile/Scrum

Experience

Software Development Engineer

Sept 2024 – Present

Unthinkable Solutions (Daffodil Software)

Noida, India

User Management Matchmaking Site (.NET Core, ASP.NET Web API, SQL Server)

- Own client requirements, communication, and delivery independently for this matchmaking-services platform, acting as the primary technical point of contact.
- Built and maintained scalable backend services using **.NET Core**, focused on performance and long-term maintainability.
- Built backend services and **RESTful Web APIs** in .NET to support core platform features and third-party integrations.
- Implemented a **DocuSign** integration via .NET Web API for digital document signing workflows.
- Improved page load times by **30–40%** across the platform, resolving the biggest reported pain point for users and clients alike.
- Made the platform fully **responsive** across devices, improving usability for agents and clients accessing the site on mobile and tablet.
- Optimized **SQL Server** queries and indexing to improve response times on high-traffic endpoints.
- Used **Git** for version control across feature development and release branches.

Personal Projects

Stack Spot – Backend Blog Platform (.NET Core, ASP.NET Identity, CQRS, EF Core, SQL Server, Caching, React.js) [GitHub](#)

- Designed and built a backend-focused blogging platform supporting post creation, follow/unfollow, likes, bookmarks, and a dark mode toggle.
- Built the frontend using **React.js**, consuming the platform's REST APIs to render feeds, profiles, and bookmarks.
- Implemented secure user authentication and role-based authorization using **ASP.NET Identity**, including registration, login, and session management.
- Structured the application using **CQRS** to separate read/write operations, improving code organization and testability.
- Applied **caching** for frequently accessed data such as post feeds and bookmarks to reduce database load and improve response times.
- Modeled relational data and wrote optimized queries with **EF Core** against **SQL Server** for posts, follows, and bookmarks.

Study Notion – Online Course Platform (React, Node.js, Express, MongoDB)

[Live GitHub](#)

- Developed a MERN-based platform for course creation and learning, with full CRUD and user management.
- Built the frontend using **React**, with a responsive UI for browsing, enrolling in, and consuming course content.
- Built REST APIs with **Node.js** and **Express** to handle course, enrollment, and user data, backed by a **MongoDB** schema.
- Implemented user authentication and protected routes to secure access to course content.

Achievements

- Finalist, HackOFiesta v5 2024 – ranked 6th out of 200+ teams

Education

Shri Ramswaroop Memorial College of Engineering and Management, Lucknow, India

Bachelor of Technology in Information Technology

2021 – 2025

CGPA: 8.4/10
